

# Interstate Migration of Lawful Permanent Residents Who Naturalize

JAMES YANKAY

## SUMMARY

The geographic mobility of lawful permanent residents (LPRs) within the United States has implications for their integration and socioeconomic achievement. Migration data on LPRs are not routinely collected by the Department of Homeland Security. However, information supplied on applications for LPR status and naturalization may be used to measure changes in the state of residence occurring between the grant of LPR status and the time of naturalization. This Office of Immigration Statistics Fact Sheet examines interstate migration among LPRs who became naturalized U.S. citizens by comparing their state or territory of residence (or intended residence) when they became LPRs with their residence when they naturalized.

## DATA

Data were obtained from administrative case-tracking systems of U.S. Citizenship and Immigration Services (USCIS) of the Department of Homeland Security. The analysis was limited to individuals who 1) were granted LPR status during 1973–1975,<sup>1</sup> 1983–1985, and 1993–1995 (considered representative of the 1970s, 1980s, and 1990s, respectively) and naturalized by the end of 2012,<sup>2</sup> 2) were 18 years of age or older at the time they obtained LPR status, and 3) had a valid U.S. state or territory code on both LPR and naturalization records. Data showing the proportion of LPRs living in a different state at the time they naturalized were tabulated by selected immigrant characteristics.

## RESULTS

- The proportion of LPRs living in a different state at the time they naturalized compared to the time when they obtained LPR status was greater among those who obtained LPR status in 1973–75 (31 percent) than either in 1983–85 (26 percent) or 1993–1995 (21 percent) (see Table 1).

- Individuals who obtained LPR status at an older age were more likely to naturalize in the state in which he/she obtained LPR status than individuals who obtained LPR status at a younger age.
- LPRs from Africa and Asia were more likely to live in a different state when they naturalized than LPRs from other regions of the world. LPRs from Europe, North America, and the Caribbean were less likely to naturalize in a different state.
- Employment-based LPRs were more likely to have moved to a different state between the time they obtained LPR status and naturalized than individuals who received LPR status on another basis.
- States that attract individuals as LPRs remain attractive to those individuals when they naturalize; the proportion of individuals living in a different state at the time they naturalized was lower for those who obtained LPR status in the four leading states than the average of all other states. The four leading states of residence were California, New York, Florida, and Texas.

## FOR MORE INFORMATION

For more information about immigration and immigration statistics, visit the Department of Homeland Security web site at <http://www.dhs.gov/immigration-statistics>.

<sup>1</sup> In this fact sheet, all years refer to fiscal years.

<sup>2</sup> Individuals who naturalized in 1977 were excluded due to data limitations.
